How Be Right works

27 October 2026

A repair request moves between the lanes from left to right. The thick box is the step where the customer says yes: nothing is sent or charged before it. Dashed arrows show what is shared: the technician on the way, and the partner shops near the job.

What each role can do

27 October 2026

Customer

Website and app, own account

- Create an account (all fields required)
- Book: 14 services + Other, questions, photos, date, map pin
- Approve or decline the price (asked to confirm)
- Cancel before the visit; once scheduled, ask to cancel
- See the technician on the way, until they arrive
- Rate the job; report a problem within 7 days
- Emergency: safety steps and quick questions, no account needed
- My account: profile, details, email, password, delete

Specialist

Dashboard: Requests, Emergencies, Technicians

- Requests: review, preparation note
- Types the price; the customer approves it
- Only technicians who work in the request's district
- Assign a technician and schedule
- Follow jobs (updates within 10 seconds)
- Close a request, or charge the $10 visit fee
- Emergencies: see the customer's answers, send a technician
- Technicians: look and contact only

Technician

Added by an admin after a meeting

- Apply: trade, districts, experience, tools, transport, photo
- Go online (Available): position shared with the team
- Gets each job by email and in My jobs
- My jobs: To do and Done tabs, one job at a time
- 4 steps: On the way, Start, Finish, Done
- On my way: the customer sees them until Arrived
- Before and after photos (required); report no repair
- Parts shops near each job; profile with photo and rating

Admin

Admin area: everything a specialist does, plus

- Applications: call, meet, accept or reject
- Technicians: districts, transport, documents, remove
- Add a technician by hand, with an account
- Exception: send a technician outside their districts
- Parts shops: add, edit, hide, delete
- Team: add staff, change roles, reset two-step
- Customers, Overview figures, Activity log
- Sign-in: password + authenticator code

Key rules

Price

The specialist types the price after reviewing the request. The customer sees it and approves before anyone is sent: nothing is charged without that yes.

Districts

Technicians pick the districts they work in. A request's district comes from its map pin. Outside their districts: not suggested, and only an admin can make an exception.

Available

Technicians go online while they work, so the team sees who is Available. On my way: the customer follows them on the map until they arrive.

Visit fee and damage

$10 only if no repair happens (otherwise it is inside the price). Damage is the technician's responsibility; if they cannot fix it, Be Right does.

Everything works on the website and in the phone app, in English and Arabic. Emails go out at each step once the email service is set up. Payments are not in the app yet.
