Be Right: Questions for the specialist

Date: 16 October 2026 **Specialist:** _____ **Asked by:** _____

Goal: check that the app follows how the work is really done. The app today: customer books with answers and photos, specialist reviews and sends a price, customer approves, specialist assigns a technician and a date, technician does the job, 7-day guarantee. Emergencies: the customer sends the problem, location and phone, then calls; the technician is sent first, details come during the call.

1. The daily workflow

1. How do requests reach you today (phone, WhatsApp, walk-in)? About how many per day?

2. Can you give a price from the customer's answers and photos, or do you often need a visit first? For which jobs?

3. How fast should a customer get a price? What is a realistic target?

4. How do you choose the technician: trade, area, availability, rating? Who decides?

5. Are three time slots (morning, afternoon, evening) enough, or do customers need an exact time?

6. On site, the job costs more than the price sent. How is the new price agreed with the customer?

7. The visit fee is $10 when no repair happens (nothing to fix, nobody home, cancelled late). Is $10 right? When would you waive it?

8. Payment: who collects it, cash or card, and when? Does the technician get paid on the spot?

9. What happens today when a technician is late or does not show up?

10. The guarantee is 7 days after the job. Is that right? What is covered and what is not?

2. Emergencies

11. Our emergency list: water leak, blocked toilet, locked out, broken door or window, electrics not working, damaged roof, no hot water, other. What is missing or wrong?

12. Who answers the emergency line, and at what hours (nights, weekends, holidays)?

13. How fast can a technician really arrive? Should we promise a time to the customer?

14. Is the price agreed before sending the technician, or after they arrive? Is there an emergency surcharge?

15. We send the technician first and add the name and price during the call. Does that work in practice?

3. The questions we ask the customer

Each service asks 2 to 5 questions plus photos. Example, plumbing: What is happening? Where is the leak? How much water? Can you stop the water? Can you see the source?

16. Which answers really help you give a price? Which ones are useless?

17. What do you always ask on the phone that the form does not ask (brand, age of the unit, floor, elevator, parking, access hours)?

18. What should we tell customers to photograph so you can price without a visit?

19. Which answers mean danger (gas smell, sparks, water near electricity) and should turn the request into an emergency or a safety warning?

20. Our services: plumbing, electrical, AC, appliance repair, carpentry, painting, waterproofing, installation, locksmith, cameras and alarms, plus cleaning, guard, valet and event staff, porter, pest control, landscaping. Add, remove or merge any?

21. Facility services (cleaning, guard, valet, porter, pest control, landscaping): same booking as repairs, or a contract and a quote?

22. Businesses (restaurants, offices, buildings): do they need different questions, monthly contracts or invoices?

4. Technicians

23. In the meeting with a new technician, what do you check (skills test, ID, references, tools)?

24. Are technicians employees or independent partners? How are they paid (per job, percentage, salary)?

25. Can a technician refuse a job? How should they accept it?

26. Will technicians use the app on site: mark arrived, take before and after photos, share their location?

27. What should a technician report after a job (photos, parts used, time spent, extra work)?

5. The system and the dashboard

28. When a request arrives, what do you need to see first?

29. Today the app sends emails. Do you need WhatsApp, SMS or phone notifications instead?

30. Customers who call instead of booking: should the specialist create the booking for them in the dashboard?

31. How many specialists work at the same time? Should each request belong to one specialist?

32. Which reports do you need (jobs per day, revenue, technician performance, cancellations)?

33. What do you use today that the app does not replace yet (Excel, WhatsApp groups, notebook)?

6. Customers

34. Most common customer complaints or problems (no-shows, cancellations, price disputes)?

35. Will customers use the app or the website, or do they prefer calling and WhatsApp?

36. Prices in USD only, or also in Lebanese pounds? Arabic and English enough, or French too?
