Be Right: Unclear cases to decide

Date: 15 October 2026 **With:** _____ **Notes by:** _____

Situations the app does not handle clearly yet. For each one: what should happen? Under every question, **Today** says what the app does now, so the gap is visible. Payments are left out on purpose.

1. Booking

1. The customer books in an area we don't cover yet. Who decides, and what do we tell them?
   Today: anyone can book anywhere; a specialist has to notice and close the request with a reason.

2. One booking with two different problems (a leak and a broken socket). One request or two? One technician or two?
   Today: one service per request; the customer must book twice.

3. The customer picks the wrong service (books "Plumbing" for a water heater that is electrical). Can the specialist change it?
   Today: the service can't be changed; the request has to be closed and booked again.

4. Someone books for another person (their parents' home). Whose phone do we call, and who approves?
   Today: the account holder approves; the phone typed in the booking is the one used.

5. A customer calls the office instead of using the app (elderly, no smartphone). Who enters the booking?
   Today: only emergencies can be entered by a specialist; normal bookings need the customer's own account.

6. The customer sends no photos, or useless ones. Do we still price it, ask for more, or plan a visit first?
   Today: photos are optional; the specialist decides alone.

2. Review and the customer's answer

7. The specialist can't reach the customer to clarify. How many tries, and after how long do we close the request?
   Today: no limit; the request stays In review until someone acts.

8. The customer never answers the price. After how many days does the request expire? Do we remind them?
   Today: it stays Price ready forever; no reminder.

9. Two specialists open the same request at the same time. Who owns it?
   Today: anyone can act on any request; the last action wins.

10. A request arrives at night or on a holiday. What does the customer see, and when is it handled?
    Today: nothing tells the customer when the office opens.

3. Scheduling

11. No technician is free on the date the customer chose. Who proposes a new date, and must the customer agree?
    Today: the visit is scheduled on the customer's date and time slot; the app can't move it.

12. The customer wants to move a visit that is already scheduled. How?
    Today: no "move" button; they can only ask to cancel.

13. The technician is running late or can't come. Who tells the customer, and how?
    Today: nothing automatic; someone must call.

14. A job needs two technicians (heavy installation, a big cleaning).
    Today: one technician per job.

4. On site

15. Nobody is home at the agreed time. How long does the technician wait, and who decides what happens next?
    Today: the technician reports "nobody there"; a specialist decides.

16. The technician finds a bigger problem than described. Stop and call the office, or ask the customer directly?
    Today: no in-app step for a change of plan on site.

17. The job needs a part that isn't available today. Second visit on the same request, or a new one?
    Today: the job stays In progress; there is no "second visit".

18. The technician can't do the job (wrong skills, needs a specialist tool). Hand over to another technician?
    Today: a specialist can reassign; the first visit is not recorded as such.

19. The place is unsafe (gas smell, exposed wires, aggressive person). Can the technician leave? What is reported?
    Today: no "unsafe, left the site" report.

20. The technician damages something in the home. Who is responsible, and how is it recorded?
    Today: nothing in the app; no damage report.

21. The customer asks the technician for extra work "off the app". What is the rule?
    Today: the terms say technicians must use the app honestly; nothing about work outside the app.

5. After the job and the guarantee

22. What counts as "the same problem" for the 7-day guarantee, and what counts as a new problem?
    Today: the customer reports, the specialist judges case by case.

23. The customer complains after the 7 days. Do we help anyway, as a new request?
    Today: the "Report a problem" button disappears after 7 days.

24. A bad rating (1 or 2 stars). Does someone call the customer? Does it affect the technician?
    Today: the stars count in the average; nobody is alerted.

25. The customer is unhappy but doesn't use the app (calls or WhatsApps instead). Where is it recorded?
    Today: only in-app reports are recorded.

6. Emergencies

26. The customer sends an emergency but never calls. Do we call them back? After how many minutes?
    Today: it waits in the list with their phone; no rule on calling back.

27. No technician is available (night, all busy). What do we tell the customer?
    Today: nothing in the app; the specialist explains on the phone.

28. It turns out not to be urgent. Do we turn it into a normal booking?
    Today: it can only be dismissed, or sent as an emergency job.

29. The same customer sends several emergencies in a few minutes (panic, or a prank).
    Today: each one appears; up to 30 per hour from one connection.

30. Real danger (fire, gas, someone hurt). What exactly does the specialist say and do?
    Today: the app tells customers to call the local emergency number first; no script for the specialist.

7. Technicians

31. A technician refuses or hands back a job. How, and how late is acceptable?
    Today: no "refuse" button; only a specialist can reassign.

32. A technician is sick or on leave. How do we know before assigning?
    Today: no availability or days off in the app.

33. Which areas does each technician cover?
    Today: not recorded; the specialist must remember.

34. Can the technician contact the customer after the job? Can the customer call the technician directly?
    Today: the technician sees the customer's phone on their jobs; no rule after the job.

35. When do we stop working with a technician (complaints, no-shows, bad ratings)?
    Today: an admin decides alone; no rule written.

8. Customers and special services

36. An abusive customer, or one who keeps cancelling. Can we refuse their bookings?
    Today: no way to block a customer.

37. Guard, valet, porter, cleaning: booked by shift and number of people, maybe for several days. Does the repair flow fit?
    Today: same flow as a repair: one date, one time slot, one technician.

38. Businesses (restaurants, buildings) with several sites, several contacts, or a monthly contract.
    Today: one account = one person; no company account or contract.

39. Photos taken inside a customer's home: who can see them, and how long do we keep them?
    Today: the customer, the assigned technician and the staff see them; kept while the account exists.

40. A customer wants to delete their account while a visit is scheduled.
    Today: refused until the visit is cancelled or done.
